PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Security Police career field (AFSCs 811X0, 811X2, and 811X2A). Authority for conducting occupational surveys is contained in AFR 35-2. Computer products upon which this report is based are available for the use of operations and training officials.

The survey instrument was developed by Captain Ken TeBrink, Inventory Development Specialist, with computer programming support furnished by Master Sergeant Cornelia Wharton. Ms Tamme Lambert provided administrative support. Mr Robert L. Alton, Occupational Analyst, analyzed the data and wrote the final report. This report has been reviewed and approved by Lieutenant Colonel Johnny M. Collins, Chief, Airman Analysis Section, Occupational Analysis Flight, USAF Occupational Measurement Squadron (USAFOMS).

Copies of this report are distributed to Air Staff sections, major commands, and other interested training and management personnel. Additional copies are available upon request to the USAF Occupational Measurement Squadron, Attention: Chief, Occupational Analysis Flight (OMY), Randolph AFB, Texas 78150-5000 (DSN 487-6623).

GARY R. BLUM, Lt Colonel, USAF
Commander
USAF Occupational Measurement
Squadron

JOSEPH S. TARTELL
Chief, Occupational Analysis Flight
USAF Occupational Measurement
Squadron

SUMMARY OF RESULTS

1. Survey Coverage: The Security Police career field was surveyed to evaluate changes in the 811XX career ladders and to obtain current task and equipment data for use in evaluating current training programs. Due to the large number of assigned 811XX personnel, a stratified random sample process was used to select participants. Survey results are based on responses from 6,014 respondents (80 percent of the total personnel selected for survey). All major using commands are satisfactorily represented in the survey sample.
2. Specialty Jobs: Seven clusters and fourteen independent jobs were identified in the career ladder structure analysis. Six clusters and eleven of the independent jobs involved the primary day-to-day technical responsibilities of the career ladders in the survey. The remaining cluster and independent jobs can be generally categorized as staff or support functions. Survey data indicate personnel are performing jobs as outlined in the current classification structure, with some job diversity notable in the 811X0 and 811X2 career ladders.
3. Career Ladder Progression: Three- and 5-skill level jobs in both career ladders and the A-shred were found to be highly technical. Although 811X0 and 811X2 7-skill level NCOs spend over half of their job time on nonsupervisory tasks, a shift toward supervisory functions is evident. A-shred 7-skill level personnel devote the majority of their job time to supervisory and dog training activities. Nine-skill level and Chief Enlisted Manager (CEM) Code personnel are basically managers and supervisors.
4. AFR 39-1 Specialty Descriptions: The descriptions for the Security Police Superintendent, Law Enforcement Specialist, and Law Enforcement Supervisor were found to be complete and accurately portray the nature of the jobs. Some adjustment is suggested for the 811X0 descriptions and the A-shred portion of the 81172 descriptions.
5. Training Analysis: The Specialty Training Standard (STS) for each career ladder is generally supported by survey data. Both the 811X0 and 811X2A documents may require some adjustments. Plans of Instruction (POI) for the 811X0 and 811X2 ABR courses are generally supported by survey data, but each contains some criterion objectives requiring review due to low percentages of first-term airmen performing tasks being trained. Four hours of instruction in the Patrol Dog Handler course require review.
6. Implications: Personnel in the 811XX career ladders are performing a variety of different jobs, with very little overlap between the two career ladders and A-shred personnel. Career field ABR courses are generally supported by survey data, although some adjustments need to be considered. Job interest for 811X0 personnel is disturbingly low and requires the attention of career ladder managers.

OCCUPATIONAL SURVEY REPORT
SECURITY POLICE CAREER LADDERS
(AFSC 811XX)

INTRODUCTION

This is a report of an occupational survey of the Security (AFSC 811X0) and Law Enforcement (AFSCs 811X2/A) career ladders completed by the USAF Occupational Measurement Squadron. This survey was requested by HQ AFOSP (now AF Security Police Agency - AFSPA), Kirtland AFB NM, to evaluate changes in the career ladders and to obtain current task and equipment data for use in evaluating current training programs. The last survey results pertaining to these career ladders were published in November 1984.

Background

As described in AFR 39-1 Specialty Descriptions, dated October 1991, personnel in the 811X0 career ladder are responsible for guarding Air Force weapons systems; defending Air Force installations; protecting personnel, equipment, and facilities; and performing special security, corrections, and air base ground defense functions. Personnel in the 811X2 career ladder (per AFR 39-1 Specialty Descriptions dated April 1991) are responsible for maintaining law and order and protecting personnel, equipment, and facilities. Additionally, they perform special law enforcement and corrections functions and support Security Police engaged in air base ground defense (ABGD) functions. Those 811X2 airmen awarded the A shred are also responsible for the training, care, and proper utilization of military working dogs (MWD).

Primary entry into the career ladders is from the Basic Military Training Group (BMTG) through a Category A, 5-week and 3-day formal training course for 811X0 personnel (3ABR81130 003) and a Category A, 5-week and 3-day formal training course for 811X2 airmen (3ABR81132 003/004). Additionally, personnel in the Law Enforcement specialty selected for the "A" shred (Military Working Dog Qualified) attend a follow-on course of 6 weeks and 3 days (3ALR81132A 001). Entry into the 811XX career field currently requires an Armed Services Vocational Aptitude Battery (ASVAB) General score of 35. Each of the formal training courses discussed above is conducted at Lackland AFB, Texas.

Since this report encompasses two career ladders and a shred with different responsibilities, separate specialty training standards (STSs) and separate training courses, the report is divided into five sections. The first section deals with the career ladder structure utilizing the total

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED.

sample of 811X0, 811X2, and 811X2A personnel. Sections II, III, and IV discuss the separate ladders and shred, including such topics as: (1) comparison of pertinent job structure and other survey data with career ladder documents such as AFR 39-1 Specialty Descriptions, STSs, and Plans of Instruction (POI); (2) analyses of Total Active Federal Military Service (TAFMS) and Duty Air Force Specialty Code (DAFSC) groups; and (3) analyses of major command (MAJCOM) groups. Section V discusses Job Satisfaction data for various groups and the implications of the survey results.

SURVEY METHODOLOGY

Inventory Development

The data collection instrument for this occupational survey was USAF Job Inventory AFPT 90-811-858, dated September 1990. A tentative task list was prepared after reviewing pertinent career ladder publications and directives, tasks from the previous survey instrument, and data from the last Occupational Survey Report (OSR). The preliminary task list was refined and validated through personal interviews with 72 subject-matter experts (selected to cover a variety of MAJCOMs and 811XX career field functions) at the following locations:

<u>BASE</u>	<u>REASON FOR VISIT</u>
Little Rock AFB AR	MAC base. MAC ABGD training and evaluation center.
Keesler AFB MS	ATC base. Specialized security clearance processing function. Operates Air Force Law Enforcement Terminal System (AFLETS) and Security Police Automated System (SPAS)
Eglin AFB FL	TAC/AFSC base. Multiple functions such as magistrate system; service as Systems Security Engineers (SSE) for testing purposes; and mobility commitment.
Clark AB RP	PACAF base. Multiple functions such as overseas ABGD training and "real time" mission; large MWD activity; anti terrorism section; and town patrol operations.

Davis-Monthan AFB AZ

TAC base. Specialized security requirements and mobility commitments.

Kunsan AB ROK

PACAF base. Unique security operations due to remote location and shared responsibilities with ROK. Varied weapons usage.

Lowry AFB CO

ATC base. Special confinement and corrections activities.

Ellsworth AFB SD

SAC base. Missile security operations. Northern tier base.

Lackland AFB TX

Location of ABR/ALR technical training courses.

The resulting job inventory contained a comprehensive listing of 886 tasks grouped under 18 duty headings and a background section requesting such information as grade, duty title, types of weapons carried or used, security police tactics or procedures used, and types of equipment used or operated.

Survey Administration

From October 1990 through March 1991, Military Personnel Flights (MPF) in operational units worldwide administered the inventory to job incumbents holding DAFSC 811XX. Job incumbents were selected from a computer-generated mailing list obtained from personnel data tapes maintained by the Armstrong Laboratory/Human Resources Directorate (AL/HRD).

Each individual who completed the inventory first completed an identification and biographical information section and then checked each task performed in his or her current job. After checking all tasks performed, each member then rated each of these tasks on a 9-point scale, showing relative time spent on that task, as compared to all other tasks checked. The ratings ranged from 1 (very small amount time spent) through 5 (about average time spent) to 9 (very large amount spent).

To determine relative time spent for each task checked by a respondent, all of the incumbent's ratings are assumed to account for 100 percent of his or her time spent on the job and are summed. Each task rating is then divided by the total task ratings and multiplied by 100 to provide a relative percentage of time for each task. This procedure provides a basis for comparing tasks in terms of both percent members performing and average percent time spent.

Survey Sample

Personnel were selected to participate in this survey so as to ensure an accurate representation across MAJCOMs and military paygrade groups. Due to the large number of assigned 811XX personnel, a stratified random sampling process was used to select survey participants. Approximately 20 percent of the assigned population were selected to participate in the survey. Table 1 reflects the percentage distribution, by MAJCOM, of assigned personnel in the career ladders as of September 1990. The 6,014 respondents in the final sample represent 80 percent of the total personnel surveyed. Table 2 reflects the paygrade distribution for these 811XX personnel. As reflected in these tables, the survey sample is a very good representation of the career field population.

Task Factor Administration

While most participants in the survey process completed a USAF Job Inventory, selected senior 811XX personnel were asked to complete booklets rendering judgements on task training emphasis (TE) or task difficulty (TD). The TE and TD booklets were processed separately from the job inventories. The information gained from these task factor data is used in various analyses and is a valuable part of the training decision process.

Task Difficulty (TD). Each individual completing a TD booklet was asked to rate all of the tasks on a 9-point scale (from extremely low to extremely high) as to the relative difficulty of each task in the inventory. Difficulty is defined as the length of time required by the average incumbent to learn to do the task. Task difficulty data were independently collected from 7-skill level or 9-skill level personnel stationed worldwide (73 AFSC 811X0 raters, 73 AFSC 811X2 raters, and 45 AFSC 811X2A raters). Interrater reliability was determined to be adequate for each AFSC, which reflects a satisfactory agreement among raters. Ratings were standardized so tasks have an average difficulty of 5.00, with a standard deviation of 1.00. The resulting data yield essentially a rank ordering of tasks indicating the degree of difficulty for each task in the inventory.

Training Emphasis (TE). Individuals completing TE booklets were asked to rate tasks on a 10-point scale (from no training required to extremely high amount of training required). Training emphasis is a rating of which tasks require structured training for first-term personnel. Structured training is defined as training provided by resident technical schools, field training detachments (FTD), mobile training teams (MTT), formal OJT, or any other organized training method. Training emphasis data were independently collected from 7-skill level or 9-skill level personnel stationed worldwide (74 AFSC 811X0 raters, 85 AFSC 811X2 raters, and 41 AFSC 811X2A raters). The interrater reliability for these raters was adequate, indicating there was satisfactory agreement among raters for each AFSC as to which tasks required some form of structured training and which did not. In the 811X0 career ladder, tasks have an average TE rating of 1.83; tasks considered high in training emphasis have ratings of 3.50 or above. In the 811X2 career ladder, tasks have an average TE rating of

NOTE: Manning figures as of September 1990

1.98; tasks considered high in training emphasis have ratings of 3.64 or above. For the "A" shred, tasks have an average TE rating of 1.95; tasks considered high in training emphasis have ratings of 3.72 or above. As was discussed in the Task Difficulty (TD) section above, TE rating data may also be used to rank order tasks indicating those tasks which senior NCOs in the various career ladders consider the most important for the first-term airman to know.

When used in conjunction with the primary criterion of percent members performing, TD and TE ratings can provide insight into first-term personnel training requirements. Such insights may suggest a need for lengthening or shortening portions of instruction supporting AFS entry-level jobs.

SECTION I

SPECIALTY JOBS (Career Ladder Structure)

A USAF Occupational Analysis begins with an examination of the career ladder structure. The structure of jobs within the Security Police career ladders was examined on the basis of similarity of tasks performed and the percent of time spent ratings provided by job incumbents, independent of other specialty background factors.

Each individual in the sample performs a set of tasks called a job. Individual jobs are organized into similar units of work by an automated job clustering program. This hierarchical grouping program is a basic part of the Comprehensive Occupational Data Analysis Program (CODAP) system for job analysis. Each individual job description (all the tasks performed by that individual and the relative amount of time spent on those tasks) in the sample is compared to every other job description in terms of tasks performed and the relative amount of time spent on each task in the job inventory. The automated system is designed to locate the two job descriptions with the most similar tasks and percent time ratings and combine them to form a composite job description. In successive stages, new members are added to initial groups, or new groups are formed based on the similarity of tasks performed and similar time ratings in the individual job descriptions.

The basic identifying group used in the hierarchical job structuring process is the Job. When there is a substantial degree of similarity between Jobs, they are grouped together and identified as a Cluster. Specialized Jobs too dissimilar to fit within a Cluster are labeled Independent Jobs (IJ). The job structure information resulting from this grouping process (the various jobs within the career ladder) can be used to evaluate the accuracy of career ladder documents (AFR 39-1 Specialty Descriptions and STSs) and to gain a better understanding of current utilization patterns. The above terminology will be used in the discussion of the 811XX career ladder structure.

Overview of Specialty Jobs

Structure analysis identified 7 clusters and 14 independent jobs within the survey sample. Based on task similarity and relative time spent, the division of jobs performed by 811XX personnel is illustrated in Figure 1, and a listing of those clusters and independent jobs is provided below. The stage (ST) number shown beside each title is a reference to computer-printed information; the number of personnel in each group (N) is also shown.

- I. INSTALLATION ENTRY CONTROL CLUSTER (ST0300, N=218)
- II. INSTALLATION PATROL CLUSTER (ST0346, N=1,029)
- III. INVESTIGATIONS (IJ) (ST0335, N=90)
- IV. CONFINEMENT AND CORRECTIONS (IJ) (ST0799, N=59)
- V. CUSTOMS (IJ) (ST0328, N=30)
- VI. MILITARY WORKING DOG (MWD) HANDLING CLUSTER (ST0228, N=178)
- VII. MILITARY WORKING DOG (MWD) TRAINING (IJ) (ST1456, N=22)
- VIII. AIRCRAFT AND WEAPONS STORAGE SECURITY CLUSTER (ST0188, N=1,497)
- IX. MISSILE SECURITY CLUSTER (ST0137, N=498)
- X. KEYS AND CODES CONTROL (IJ) (ST0796, N=12)
- XI. AIR BASE GROUND DEFENSE (ABGD) CLUSTER (ST0171, N=617)
- XII. EMERGENCY SERVICE TEAM (EST) (IJ) (ST0293, N=15)
- XIII. ARMORY (IJ) (ST0096, N=202)
- XIV. MANAGEMENT AND STAFF CLUSTER (ST0177, N=248)
- XV. QUALITY CONTROL (IJ) (ST0654, N=69)
- XVI. UNIT TRAINING (IJ) (ST0512, N=69)
- XVII. VEHICLE CONTROL (IJ) (ST0190, N=17)
- XVIII. CRIME PREVENTION AND RESOURCE PROTECTION (IJ) (ST0627, N=52)
- XIX. INFORMATION, PERSONNEL, AND INDUSTRIAL SECURITY (IJ) (ST0385, N=82)
- XX. REPORTS AND ANALYSIS (IJ) (ST0363, N=37)

811XX SPECIALTY JOBS (N=6,014)

FIGURE 1

XXI. PASS AND REGISTRATION (IJ) (ST0179, N=81)

The respondents forming these groups account for 85 percent of the survey sample. The remaining 15 percent were performing tasks or series of tasks which did not group with any of the defined jobs. Job titles given by respondents which were representative of these personnel include Unit EPR/OPR Monitor, Property Custodian, Stinger Gunner, Mounted Horse Patrolman, Dormitory Manager, and Unit PRP Monitor.

Group Descriptions

The following paragraphs contain brief descriptions of the clusters and independent jobs identified through the career ladder structure analysis. Selected background data for these groups are provided in Table 3. Representative tasks for all the groups are contained in Appendix A.

I. INSTALLATION ENTRY CONTROL CLUSTER (ST0300). The 218 airmen forming this group (4 percent of the survey sample) are responsible for authorizing vehicles onto the installation, authenticating requests for visitor entry and issuing visitor passes, enforcing the traffic code, and, when necessary, searching and inspecting personnel and vehicles. Performing a highly technical job (98 percent of their relative job time), tasks typical of the average 48 tasks performed are:

- issuing visitor passes
- directing traffic
- opening or closing installation primary entry control points
- providing directions or information to visitors
- issuing traffic tickets or violation notices

Of the two job variations within this cluster, one group was distinguished by the performance of a combination of entry control and installation patrol tasks. Comprised primarily of 811X2 personnel (79 percent), 89 percent are still in their first enlistment and report an average of only 32 months time in the service.

II. INSTALLATION PATROL CLUSTER (ST0346). Representing 17 percent of the survey sample (the second largest group identified), these 1,029 predominantly 811X2 airmen (85 percent) perform a series of tasks that cover a variety of law enforcement functions. Examples of patrol duties include responding to incidents and complaints; conducting initial investigations of incidents, complaints, and traffic accidents; preparing reports; enforcing the installation traffic code; and conducting building checks. Of the average 109 tasks performed, tasks reflecting the above responsibilities include:

^a Columns may not add to 100 percent due to rounding or nonresponses

- testing or operating speed measuring devices
- responding to duress or alarm activations
- conducting building security checks
- interviewing witnesses or complainants
- performing on-base mobile patrols
- handcuffing subjects

Of the five job variations within this cluster, one group (30 airmen) was notable in that members performed both off-base foot patrols and off-base mobile patrols (Town Patrolmen). Another group was differentiated by the performance of tasks pertaining to Air Base Ground Defense (ABGD) operations. Jobs as Desk Sergeants, Law Enforcement Supervisors, and Flight Chiefs/Sergeants were also identified based on differing combinations of technical and supervisory tasks and the time spent on those tasks.

III. INVESTIGATIONS (ST0335). The 90 experienced members comprising this group (an average of over 9 years in the career field) are responsible for conducting follow-on investigations of incidents or complaints, gathering and handling evidence, and interrogation of suspects, witnesses, or complainants. Tasks representative of this unique function include:

- initiating or completing AF Forms 1364 (Consent for Search and Seizure)
- taking latent fingerprints
- marking or seizing evidence
- compiling reports of investigation packages
- photographing incident or crime scenes
- determining chains of custody

With predominant grades of E-5 and E-6, 54 percent of this group report holding DAFSC 81172, and 41 percent report 81152 DAFSCs.

IV. CONFINEMENT AND CORRECTIONS (ST0799). While this group of 59 airmen is dominated by 811X2 personnel (83 percent), they perform a job that is distinctly different from the rest of the Law Enforcement sample population. Seventy-one percent of their relative job time is spent performing tasks pertaining to the confinement and corrections program and the supporting administrative forms and documentation tasks. Examples of the highly specialized tasks performed by these incumbents include:

- conducting prisoner roll calls or head counts
- supervising prisoner visiting periods
- briefing prisoners on facility rules and regulations
- evaluating or recommending prisoner custody levels
- completing prisoner release orders
- initiating or completing DD Forms 497 (Confinement Order)

V. CUSTOMS (ST0328). As was the case with the preceding group, these 30 airmen also perform a rather unique function. These predominantly 811X2 personnel (71 percent) devote 47 percent of their relative job time to tasks pertaining to customs activities and the preparation of associated forms and reports. Most (90 percent) report overseas assignments, and group members average 7 years time in the career field. Tasks which clearly define the job performed by these personnel include clearing personnel through customs, maintaining customs declarations files, verifying cargo manifests against cargo, confiscating contraband, and reviewing customs declarations.

VI. MILITARY WORKING DOG (MWD) HANDLING CLUSTER (ST0228). Comprised predominantly of 811X2A personnel (99 percent), these airmen are responsible for the same range of law enforcement functions as the other groups previously discussed and are similar in many respects. The major difference between the groups is that A-shred airmen perform their duties with the aid of military working dogs. Representing 3 percent of the total survey sample, the 178 airmen in this group spend 37 percent of their relative job time on general law enforcement and administrative duties and tasks; but the largest amount of their duty time is committed to tasks relating to the MWD program. Tasks which display the two major facets of their job include:

- feeding, watering, exercising, and grooming dogs
- responding to duress or alarm activations
- patrolling posts in vehicles with MWDs
- performing traffic stops
- maintaining MWD kennels or kennel areas
- interviewing witnesses or complainants

Although two job variations were found in the cluster, the primary distinction between them was the greater amount of supervisory activity reflected for one of the groups.

VII. MILITARY WORKING DOG (MWD) TRAINING (ST1456). Training military working dogs is the primary function of these 22 airmen. Twenty of the respondents report assignment to the Department of Defense Military Working Dog Agency (DODMWDA) at Lackland AFB, Texas. Performing a very limited job (15 tasks account for over 50 percent of their relative job time), 91 percent of their relative duty time is spent performing tasks pertaining to the MWD program and the associated administrative forms and reports. Typical tasks performed include:

- conducting MWD care and handling initial training
- maintaining MWD training and utilization records
or charts
- identifying MWD behavior changes

conducting MWD team drug detection initial training
conducting protocol training for detector MWDs
initiating or completing AFMTC Forms 375 (Military
Working Dog Status Report)

The least experienced of any group identified in the career ladder structure (an average of only 22 months in the career field), 77 percent report holding an E-3 paygrade, and 91 percent are still in their first enlistment.

VIII. AIRCRAFT AND WEAPONS STORAGE SECURITY CLUSTER (ST0188). Comprised of 6 different job variations and representing the largest group in the career ladder structure (1,497 and 25 percent of the total sample), these respondents are 811X0 career ladder personnel who spend 57 percent of their relative job time on tasks and duties pertaining to base, weapons storage, or aircraft systems security and general security functions. An additional 13 percent of their time is spent on tasks involving individual weapons maintenance. Tasks which reflect the nature of the job performed by cluster personnel include:

responding to duress or alarm activations
conducting suspect wall searches
performing tactical deployment from non-hardened or
standard vehicles
assembling or disassembling GAU-5A or M-16 rifles
responding to priority resource security situations,
such as helping hand and covered wagon
briefing post reliefs

The six job variations forming this cluster cover a variety of activities, ranging from a sentry standing watch at an assigned post to personnel operating Master Surveillance Control Facilities. Some jobs were formed by personnel performing functions, such as serving on response force teams or working in central security control (CSC). With an average of over 6 years time in the career field, 84 percent of the group members report possession of a 5- or 7-skill level DAFSC (61 percent and 23 percent, respectively).

IX. MISSILE SECURITY CLUSTER (ST0137). Tasks performed in support of security for missile sites and convoy operations distinguish this cluster of 498 811X0 SAC airmen (8 percent of the survey sample) from the group of security personnel discussed previously. Devoting 76 percent of their relative job time to tasks and duties pertaining to general security functions, strategic missile systems security, and individual weapons maintenance, these predominantly 5-skill level airmen (71 percent) are involved in controlling entry to launch control facilities (LCF), responding to alarms, and escorting other personnel (such as maintenance workers), as required. Of the average 50 tasks performed, typical ones include:

- maintaining missile site topside security
- entering A-circuit combination changes
- responding to duress or alarm activations
- authenticating identity when entering missile launch facilities
- conducting metal detection searches of missile facility visitors

Although five job variations were identified, the majority of these airmen performed duty as LCF Alarm Response Team personnel. The most notable variation from the core group was formed by personnel who identified themselves as Flight Security Controllers and responded to tasks pertaining to briefing and dispatching security response forces.

X. KEYS AND CODES CONTROL (ST0796). Also a part of missile security operations, this small group of 12 experienced SAC personnel (an average of over 8 years' time in the career field and an average grade of E-5) is responsible for the control and issue of keys and code materials required for access to missile launch facilities. The job performed by these 811X0 personnel is very specialized and limited in scope (only 21 tasks account for over 50 percent of their relative job time). Typical of the specialized tasks performed are:

- issuing missile facility entry keys
- maintaining entry authority or entry authorization lists (EAL) accountability records
- issuing missile facility entry codes
- maintaining missile facility entry control classified code materials
- directing keys and codes control center operations

XI. AIR BASE GROUND DEFENSE (ABGD) CLUSTER (ST0171). Although the majority of these 617 airmen reported assignments to functions such as Aircraft Security Operations, Weapons Storage Site Security, Industrial Security, and Training, they are drawn together as a group because of their participation in ABGD operations. Comprised primarily of 811X0 personnel (91 percent) and representing 10 percent of the total survey sample, 91 percent of the respondents indicated specific assignment to an ABGD designated position (e.g., Fire Team Member or Leader, Squad Leader, Heavy Weapons Gun Crew) and the largest segment of their relative job time (37 percent) was committed to tasks and duties pertaining to actual or simulated ABGD operations. Performing the highest average number of tasks of any group identified in the career ladder structure analysis (126), typical ABGD tasks include:

- employing field telephone systems
- constructing individual fighting positions
- deploying during vehicle-mounted ABGD operations
- conducting combat searches
- employing land navigation techniques

Although there are three job variations identified in the cluster, all three were dominated by a core of common technical ABGD tasks. Variations among the groups were based on the amount of relative job time spent on supervisory and training tasks.

XII. EMERGENCY SERVICE TEAM (EST) (ST0293). Responsible for assisting in confrontation management situations, these teams are used in special operations that could include dealing with hostage-takers, snipers, or regaining control of strategic locations such as armories. Most of the 15 airmen serving as EST members report holding 811X0 DAFSCs (93 percent), and the group averages over 7 and 1/2 years time in the career field. Examples of characteristic tasks common to the group are:

- conducting tactical building approaches or
force positioning
- writing EST operations orders
- selecting marksman overwatch positions
- plotting EST inner or outer perimeter positions
- advising on-scene commanders on EST capabilities
and limitations

XIII. ARMORY (ST0096). Although the primary responsibility for armory personnel is to control and account for weapons, responsibility for ammunition and other equipment stored in the armory is a part of the job as well. This group was differentiated by the high number of tasks performed in support of the above responsibilities. Representing 3 percent of the survey sample (202 members), the vast majority of the group are 811X0 personnel, with only 12 percent reporting 811X2 DAFSCs. Tasks which typify armory operations include:

- inventorying ammunition, weapons, or equipment
- issuing weapons or equipment to security police
or combat crew personnel
- recharging portable communications equipment
batteries
- securing weapons storage facilities
- issuing privately owned weapons

Performing an average of 48 tasks, 64 percent of this group's relative job time is encompassed in performing individual weapons maintenance or armory tasks and handling the associated administrative tasks.

XIV. MANAGEMENT AND STAFF CLUSTER (ST0177). This cluster of 248 personnel represents 4 percent of the survey sample. Thirty-one percent of the group hold the 9-skill level or CEM Code, and 55 percent are performing at the 7-skill level DAFSC (34 percent 81170, 20 percent 81172, and 1 percent 81172A). Eighty-two percent of their relative duty time is devoted to super-

vision, management, training, and administrative functions. Averaging over 15 years in the career field (highest experience factor of all the groups identified), 75 percent of the respondents report supervisory responsibilities. Representative supervisory and managerial-type tasks performed by the group include:

- developing or improving work methods or procedures
- writing EPRs
- drafting organizational policies, operating instructions (OI), and standard operating procedures (SOP)
- scheduling leaves or passes
- analyzing or reviewing inspection reports

Within this cluster were three job variations, with two groups performing the general managerial and supply functions, while the third group performed a job oriented toward the planning and programming function.

XV. QUALITY CONTROL (ST0654). The 69 senior personnel (71 percent report 7-skill level DAFSCs and an average of 12 years time in the career field) forming this group perform a job that is characterized by the time spent performing tasks dealing with the evaluation, inspection, or review of various security or law enforcement operations or programs. Typical tasks include:

- developing inspection programs
- evaluating pass and registration programs
- reviewing inspection reports
- evaluating compliance with work standards
- developing quality control or standardization programs

XVI. UNIT TRAINING (ST0512). Representing 1 percent of the survey sample, these 69 NCOs (65 percent 811X0 and 35 percent 811X2 personnel) spend the majority of their relative job time on tasks pertaining to training (37 percent), planning and organizing (14 percent), and administrative functions (15 percent). Examples of tasks defining this group include:

- administering tests
- planning or conducting general military training (GMT)
 - or ancillary training
- establishing or maintaining study reference files
- conducting special individualized training
- conducting security police augmentee training

The majority of the group report E-5 or E-6 paygrades (43 percent and 32 percent, respectively) and reflect an average of over 11 years experience in the career field.

XVII. VEHICLE CONTROL (ST0190). Coordinating vehicle maintenance or repairs with the base transportation function, monitoring vehicle utilization, and assuring that vehicles are, and remain, properly equipped, are some of the primary responsibilities of the 17 members forming this group. These predominantly E-5 and E-6 personnel (all report 811X0 DAFSCs) spend very little time on security-oriented tasks. Examples of tasks which display the nature of this rather unique job include:

- performing security police vehicle intermediate or motor pool maintenance
- initiating or completing AF Forms 171 (Request for Driver's Training and Addition to US Govt Motor Veh Opr Permit)
- evaluating government vehicle operator qualifications
- initiating or completing AF Forms 1800 (Operator's Inspect Guide and Trouble Report (General Purpose Vehicle))
- performing security police vehicle preventative maintenance

XVIII. CRIME PREVENTION AND RESOURCE PROTECTION (ST0627). Comprised primarily of 811X2 personnel (77 percent), these relatively senior personnel (44 percent report E-5 and 25 percent report E-6 paygrades, with an average of over 8 years in the career field) are responsible for the crime prevention and resources protection programs at their installations. Typical tasks performed include:

- conducting antirobbery or drug awareness training
- conducting crime prevention surveys
- analyzing criminal statistical data
- developing resource protection plans
- writing funds or weapons inspection reports

The job performed by these 52 respondents is also identified by their involvement in police youth programs and crime prevention projects, such as Operation Crime Stop, Citizens Awareness Program, and Neighborhood Watch.

XIX. INFORMATION, PERSONNEL, AND INDUSTRIAL SECURITY (ST0385). This group of 82 respondents (over 1 percent of the survey sample) is formed by more senior personnel, with 69 percent holding a 7-skill level DAFSC (45 percent 81170 and 24 percent 81172), and 9 percent reporting performing at the 9-skill level DAFSC. This group differs from others previously discussed due to their concentration on activities pertaining to security education programs, storage

of classified materials, handling security violation reports, security classification management, security clearance processing, and industrial security matters involving Air Force contractors. Representative of the average 67 tasks performed are tasks such as:

- conducting industrial or physical security inspections
- conducting information security program annual reviews
- evaluating administrative control of classified materials
- initiating or completing DD Forms 398 (Personnel Security Questionnaire (BI/SBI))
- maintaining special security files
- evaluating information or personnel security programs

XX. REPORTS AND ANALYSIS (ST0363). Reviewing administrative correspondence or reports; initiating or completing AF Forms 83 (USAF Law Enforcement Report); conducting security police record checks; and maintaining disciplinary action files, such as revocations, barred persons, or suspended drivers files, are typical tasks for which this small group of 37 respondents is responsible. The job performed is fairly limited in scope, with only 18 tasks accounting for over 50 percent of their relative job time. Averaging over 8 years in the career field, most (65 percent) of the group members report an 811X2 DAFSC.

XXI. PASS AND REGISTRATION (ST0179). The group formed by these 81 members is about equally balanced between 811X0 and 811X2 personnel (48 percent and 50 percent respectively). The job performed by the incumbents is administrative in nature and deals with the responsibilities of operating the pass and registration functions at Air Force activities. Tasks which characterize the job performed by the group include:

- issuing identification cards or badges
- fingerprinting personnel or prisoners
- issuing vehicle decals
- updating or accessing SPAS data
- photographing personnel for identification credentials

The majority of these group members report holding a 5-skill level DAFSC and average well over 7 years in the career field.

Comparisons of Specialty Jobs

Seven clusters and fourteen independent jobs were identified in the career ladder structure analysis. Six clusters and eleven of the independent jobs were involved in the performance of the various primary day-to-day technical responsibilities of the career ladders involved. The remaining

cluster and independent jobs can be generally categorized as staff and support personnel (i.e., MANAGEMENT AND STAFF, UNIT TRAINING, QUALITY CONTROL, and VEHICLE CONTROL). The large number of clusters, independent jobs, and previously mentioned job variations within the clusters, indicates some degree of diversity in the career field, particularly within the 811X0 and 811X2 career ladders. This diversity can have some impact on training within the career field.

The six clusters representing the technical jobs were clearly AFSC specific. The same holds true for nine of the independent jobs. The remaining cluster and five independent jobs contained varying degrees of combinations of the ladders surveyed. This combination pattern is affected by the variations in the dominant manning patterns (811X0 versus 811X2) at bases across the Air Force. These manning patterns are generally dictated by each base's primary mission.

Since the jobs with combinations of AFSCs account for only 10 percent of the survey sample, it is evident that most sample respondents are working in jobs limited to specific AFSCs. Consequently, even though there are some general police tasks performed in common across the career ladders (e.g., apprehend subjects; handcuff subjects; or respond to duress or alarm activations), there is very little overlap of duties and functions between 811X0 and 811X2 career ladder personnel. Individuals holding DAFSC 811X2A, as expected, are performing many tasks in common with 811X2 airmen. Overall, the differences between the two career ladders and the A-shred are evident, and survey data indicate personnel are performing jobs as defined in the current classification structure.

Comparison of Current Group Descriptions to Previous Survey Findings

The results of the specialty job analysis were compared to those of Occupational Survey Report (OSR) AFPT 90-811-531, SECURITY POLICE CAREER LADDERS, dated November 1984. After reviewing the tasks comprising the jobs identified in 1984, all of the groups with substantial numbers of personnel could be linked to similar task performances by 1992 sample groups (see Table 4). Even though some comparable groups from 1992 to 1984 reflect different percentages of the sample, this variation could generally be attributed to modifications in the task list or to the analysis approach used.

There was one job identified in the current sample (VEHICLE CONTROL) which did not have a direct match in the 1984 career ladder structure; and one job described in 1984 (KENNEL SUPPORT SPECIALISTS) was not identified in the current sample. Both groups involve very few personnel and have little impact on the career field as a whole in terms of numbers.

Aside from the above-mentioned variations, the vast majority of the current sample were found to be performing jobs identified in 1984, thus displaying a career field which has remained relatively stable over time.

SECTION II

ANALYSIS OF 811X0 DAFSC GROUPS

An analysis of DAFSC groups, in conjunction with the analysis of the career ladder structure, is an important part of each occupational survey. The DAFSC analysis identifies differences in tasks performed at the various skill levels. This information may then be used to evaluate how well career ladder documents, such as AFR 39-1 Specialty Descriptions and the STS, reflect what career ladder personnel are actually doing in the field.

A comparison of the duty and task performance between DAFSCs 81130 and 81150 indicated that, while there are some minor differences, by and large, the jobs they perform are essentially the same. Therefore, they will be discussed as a combined group in this report. Similarly, DAFSC 81199 and CEM Code 81100 groups have been combined for reporting purposes.

The distribution of skill level groups across the career ladder jobs is displayed in Table 5, while Table 6 offers another perspective by displaying the relative percent time spent on each duty across the skill level groups. A typical pattern of progression is present, with personnel spending more of their relative time on duties involving supervisory, managerial, and training tasks as they move upward toward the 7-skill level, the 9-skill level, or the CEM Code. It is also obvious, though, that 7-skill level personnel are still very involved with technical task performance, as will be pointed out in the specific skill level group discussions below.

Skill Level Descriptions

DAFSCs 81130/81150. The 2,887 airmen in the 3- and 5-skill level group (representing 48 percent of the survey sample) performed an average of only 53 tasks. Performing a highly technical job, 60 percent of their relative duty time is devoted to tasks involving general security functions; base, weapons storage, aircraft, or missile systems security; or ABGD operations. Tasks pertaining to individual weapons maintenance and administrative functions accounted for an additional 24 percent of their duty time. Table 7 displays selected representative time-consuming tasks performed by the highest percentages of these airmen. Table 8 displays those tasks which more clearly differentiate the 3-/5-skill level and 7-skill level groups. A review of all the tasks performed by group members revealed that only eight tasks are performed by 50 percent or more of the group. This low number of common tasks performed by these airmen suggests a diverse career ladder. This diversity is also evident when you review the group's dispersion across the specialty jobs identified (see Table 5).

DAFSC 81170. Seven-skill level personnel, representing 17 percent of the survey sample, perform an average of 72 tasks. Even though 76 percent report supervisory responsibilities, only 38 percent of their job time is spent on tasks in the usual supervisory, managerial, and training duties (see Table 6).

This relatively low supervisory activity is further highlighted by the fact that only 14 percent of the 1,028 people forming this group are found in the supervisory and staff-type jobs (i.e., MANAGEMENT AND STAFF, QUALITY CONTROL, UNIT TRAINING, VEHICLE CONTROL) discussed earlier in the SPECIALTY JOBS section (see Table 5). While the display of tasks in Table 9 clearly shows that these NCOs are responsible for supervision, it also reflects the range and scope of the job, in that relatively high percentages of the group are also performing such basic technical tasks as handcuffing subjects, responding to duress or alarm activations, and cleaning weapon mechanisms or parts. Career ladder diversity is also a factor for 7-skill level personnel, since only seven tasks are performed by 50 percent or more of this group.

DAFSC 81199 and CEM Code 81100. As is typical of most career fields, personnel in the 9-skill level and CEM Code groups reported performing primarily nontechnical tasks. They performed an average of 62 tasks, with 42 tasks accounting for over 50 percent of their relative job time. Group members spent over 85 percent of their duty time on supervisory and training functions and managerial-type administrative tasks and are represented in only four of the identified jobs (see Table 5). The largest segment (65 percent) are members of the MANAGEMENT AND STAFF CLUSTER. Table 10 displays representative tasks for the group, while Table 11 presents tasks which reflect differences between these more senior NCOs and 7-skill level personnel. Table 6 displays the predominantly staff nature of these NCOs' jobs and that these personnel are the primary managers in the career ladder.

Summary

Distinctions between 811X0 skill level groups are evident, with personnel at the 3- and 5-skill levels spending the vast majority of their job time performing technical tasks across a number of different jobs. At the 7-skill level, although members still spend over half of their relative duty time on nonsupervisory tasks, a shift toward supervisory functions is quite clear. The low numbers of tasks performed by 50 percent or more of the 3-/5-skill level group and the 7-skill level group (as well as the high number of different jobs in which they perform) suggest a diverse career ladder for these personnel. Nine-skill level and CEM Code members are basically managers and supervisors performing predominantly supervisory and managerial tasks.

ANALYSIS OF 811X0 AFR 39-1 SPECIALTY DESCRIPTIONS

Survey data were compared to the AFR 39-1 Specialty Descriptions for Security Specialist and Security Supervisor, dated 31 October 1991, and Security Police Superintendent, dated 30 April 1991. These descriptions are intended to give a broad overview of the duties and tasks performed in the skill levels of the specialty.

The 3-/5-skill level specialty description is generally accurate and depicts the highly technical nature of the job, as well as the scope of the job. Some improvements, however, may be possible.

Paragraphs 1 and 2d refer to the performance of corrections program tasks as being representative of the 3-/5-skill level job. Analysis of the tasks performed which relate to the corrections function, however, indicates this activity is a very limited part of this group's responsibility. None of the tasks associated with the corrections program reflected more than one percent of this group responding, and the majority of the tasks received no response at all. References to the corrections function should be evaluated to determine if there is justification for retention in the specialty description in light of this limited involvement.

The 7-skill level description accurately portrays the combination supervisory and technical nature and scope of this group's job. As was discussed in the 3-/5-skill level description analysis, references to the corrections function should be evaluated for retention in the specialty description.

The description for the 81199 and CEM Code personnel accurately reflects the managerial nature of the job.

811X0 TRAINING ANALYSIS

Occupational survey data are one of the many sources of information which can be used to assist in the development of a training program relevant to the needs of personnel in their first enlistment. Factors which may be used in evaluating training include the overall description of the job being performed by first-enlistment personnel and their overall distribution across career ladder jobs, percentages of first-job (1-24 months TAFMS) or first-enlistment (1-48 months TAFMS) members performing specific tasks or using certain weapons, equipment, or tactics, as well as TE and TD ratings (previously explained in the SURVEY METHODOLOGY section).

To assist specifically in evaluation of the Specialty Training Standard (STS) and the Plan of Instruction (POI), technical school personnel from Lackland Training Center matched job inventory tasks to appropriate sections and subsections of the STS and POI for course L3ABR81130-003. It was this matching upon which comparison to those documents was based. A complete computer listing displaying the percent members performing tasks, TE and TD ratings for each task, along with the STS and POI matchings, has been forwarded to the technical school for their use in further detailed reviews of appropriate training documents. A summary of this information is presented below.

First-Enlistment Personnel

In this study, there are 1,465 811X0 members in their first enlistment (1-48 months TAFMS), representing 24 percent of the total survey sample. The job performed by these personnel is highly technical in nature, accounting for approximately 96 percent of their relative duty time (see Table 12). While Table 12 shows that first-term airmen spend some of their job time in a variety of career ladder functional areas, the majority is concentrated on tasks pertaining to general security, individual weapons maintenance, ABGD operations, and strategic missile systems security, as well as performing general administrative tasks. Distribution of these personnel in the career ladder jobs is displayed in Figure 2, which clearly shows group members dispersed across a number of the groups identified in the SPECIALTY JOBS analysis, although the majority are involved in jobs associated with aircraft, weapons storage, and missile security functions. Table 13 displays some of the average 49 tasks performed by the group, and, by virtue of the relatively low percentages performing any given task, also reflects the diversity of the career ladder (only 12 tasks are performed by 50 percent or more of this group).

One of the objectives of this survey project was to gather data for the training center pertaining to weapons carried or utilized, security police tactics or procedures used or practiced, equipment used or operated, as well as utilization of armed or unarmed physical apprehension and restraint techniques (PART). Accordingly, Tables 14 through 19 present percentages of first-term airmen responding to questions concerning their activities involving these items. This type of information is useful for both the technical school and MAJCOM training personnel to assist them in focusing limited training time or other resources on the most utilized items.

Training Emphasis and Task Difficulty Data

Training emphasis (TE) and task difficulty (TD) data are secondary factors that can assist technical school personnel in deciding which tasks should be emphasized in entry-level training. These ratings, based on the judgments of senior career ladder NCOs working at operational units in the field, are collected to provide training personnel with a rank-ordering of those tasks in the job inventory considered important for first-term airman training (TE) (see Table 20 for the top-rated tasks), along with a measure of the difficulty of the job inventory tasks (TD) (see the highest rated tasks presented in Table 21). When combined with data on the percentages of first-enlistment personnel performing tasks, comparisons can then be made to determine if training adjustments are necessary. For example, tasks receiving high ratings on both task factors, accompanied by moderate to high percentages performing, may warrant resident training. Those tasks receiving high task factor ratings, but low percentages performing, may be more appropriately planned for OJT programs within the career ladder. Low task factor ratings may highlight tasks best omitted from training for first-term personnel, but this decision must be weighed against percentages of personnel performing the tasks, command concerns, and criticality of the tasks.

To assist technical school personnel, USAFOMS has developed a computer program that incorporates these secondary factors and the percentage of first-enlistment personnel performing each task into a computed value identified as an Automated Training Indicator (ATI). These ATI values correspond to training decisions listed and defined in the Training Decision Logic Table found in Attachment 1, ATCR 52-22. These values allow course personnel to quickly focus their attention on those tasks which are most likely to qualify for ABR course consideration.

Various lists of tasks, accompanied by TE and TD ratings, and where appropriate, ATI values, are contained in the 811X0 TRAINING EXTRACT package and should be reviewed in detail by technical school personnel. (For a more detailed explanation of TE and TD ratings, see Task Factor Administration in the SURVEY METHODOLOGY section of this report.)

Specialty Training Standard (STS)

A comprehensive review of STS 811X0, dated November 1988, compared STS items to survey data (based on the previously mentioned assistance from technical school personnel in matching job inventory tasks to STS elements). STS paragraphs containing general knowledge information, mandatory entries, subject-matter-knowledge-only requirements, or basic supervisory responsibilities were not examined. Task knowledge and performance elements of the STS were compared against the standard set forth in AFR 8-13 (dated 1 August 1986) and AFR 8-13/ATC Supplement 1 (dated 2 March 1987), Attachment 1, paragraph A1-3c(4) (i.e., include tasks performed or knowledge required by 20 percent or more of the personnel in a skill level (criterion group) of the AFS).

Overall, the STS provides comprehensive coverage of the work performed by personnel in this career ladder, with survey data supporting most of the essential paragraphs or subparagraphs. Even though some elements did not have high percentages of personnel performing matched tasks, the fact that the supporting tasks were a part of an identifiable job being performed in the career ladder supports the retention of the STS element involving those tasks.

A few elements of the STS were not supported by occupational survey data and do require review by training personnel and subject-matter experts. Table 22 displays these elements and survey data pertaining to tasks matched to these elements. Even though the tasks shown reflect high TE ratings, and some above average TD ratings as well, the low task performance figures suggest evaluation to justify retention in the STS is warranted.

Tasks not matched to any element of the STS are listed at the end of the STS computer listing. These were reviewed to determine if there were any tasks concentrated around any particular functions or jobs. No particular trends were noted. Technical-type tasks performed by 20 percent or more respondents of the STS target groups, but which were not referenced to any STS element, are displayed in Table 23. Training personnel and subject-matter experts should review these tasks to determine if inclusion in the STS is justified.

Plan of Instruction (POI)

Based on the previously mentioned assistance from the technical school subject-matter experts in matching inventory tasks to the 3ABR81130-003 POI, dated 8 February 1991, a computer product was generated displaying the results of the matching process. Information furnished for consideration includes percent members performing data for first-job (1-24 months TAFMS) and first-enlistment (1-48 months TAFMS) personnel, as well as training emphasis (TE) and task difficulty (TD) ratings for individual tasks.

POI blocks, units of instruction, and criterion objectives were compared against the standard set forth in Attachment 1, ATCR 52-22, dated 17 February 1989 (30 percent or more of the criterion first-enlistment group performing tasks trained, along with sufficiently high TE and TD ratings on those tasks). Per this guidance, tasks trained in the course which do not meet these criteria must be considered for elimination from the formal course, if not justified on some other acceptable basis.

Review of the tasks matched to the POI reveals that most POI units of instruction or criterion objectives are supported by OSR data (based on percentages of first-term airmen performing tasks or high TE or TD ratings for pertinent tasks), or appear to be teaching steps in the instruction process. There are some units, however, which contain some objectives that apparently are not supported by these criteria and require further evaluation by training personnel and subject-matter experts (see examples in Table 24). While all of the selected sample tasks received high TE ratings (3.50 or above), all reflect less than 30 percent of the first-term population performing, and only two received above average TD ratings. The combination of low percent members performing and below average TD factors suggests the need for close examination of objectives in pertinent units of instruction to determine if retention of over 26 hours in the ABR course is justified.

ANALYSIS OF MAJOR COMMANDS (MAJCOM)

Tasks and background data for personnel of the nine MAJCOMs with the largest 811X0 populations were compared to determine whether job content varied as a function of command assignment.

Generally, the jobs performed across the commands were similar, with many tasks performed in common. The largest percentages of duty time in each command were committed to the performance of tasks involving general security functions, general administration functions, and individual weapons maintenance or armory tasks (see Table 25). Minor variances were noted, with AFSPACECOM and ESC reporting slightly more time spent on general administrative tasks and less time devoted to ABGD operations. Additionally, ATC and SAC also reflected lower percentages of relative duty time spent on ABGD operations tasks. SAC airmen were unique in that theirs was the only command identifying a significant amount of time spent on tasks dealing with missile systems security.

SECTION III

ANALYSIS OF 811X2 DAFSC GROUPS

As explained in SECTION II, data pertaining to DAFSC groups are important to the analysis of each career ladder. Since a comparison of duty and task performance between DAFSCs 81132 and 81152 indicated no substantial difference in the jobs they perform, they will be discussed as a combined group in this report. As previously indicated, DAFSC 81199 and CEM Code 81100 were also combined for reporting purposes.

The distribution of skill level groups across the career ladder jobs is displayed in Table 26, while Table 27 offers another perspective by displaying the relative percent time spent on each duty across the skill level groups. A typical pattern of progression is present, with personnel spending more of their relative time on duties involving supervisory, managerial, and training tasks as they move upward toward the 7-skill level, the 9-skill level, or the CEM Code. It is also obvious, though, that 7-skill level personnel are still involved with technical task performance, as will be pointed out in the specific skill level group discussions below.

Skill Level Descriptions

DAFSCs 81132/81152. Representing 20 percent of the survey sample, the 1,220 airmen in the 3- and 5-skill level group performed an average of 82 tasks. Performing a highly technical job, 71 percent of their relative duty time is devoted to tasks pertaining to general law enforcement (LE), LE operations, traffic management or accident investigations, and the administrative tasks and forms required in law enforcement activities. An additional 14 percent of their relative duty time was committed to tasks associated with individual weapons maintenance and ABGD operations. Although represented in 13 of the 21 jobs identified in the SPECIALTY JOBS section (see Table 26), the majority of these personnel are found in the INSTALLATION PATROL CLUSTER (56 percent) and INSTALLATION ENTRY CONTROL CLUSTER (14 percent). Table 28 displays selected representative time-consuming tasks performed by the highest percentages of these airmen. Table 29 displays those tasks which clearly differentiate the 3-/5-skill level and 7-skill level groups.

DAFSC 81172. Seven-skill level personnel, representing 8 percent of the survey sample, perform an average of 95 tasks. Even though 76 percent report supervisory responsibilities, only 35 percent of their job time is spent on tasks in the usual supervisory, managerial, and training duties (see Table 27). This relatively low supervisory activity is further highlighted by the fact that only 16 percent of the 508 people forming this group are found in the supervisory and staff-type jobs (i.e., MANAGEMENT AND STAFF, QUALITY CONTROL, UNIT TRAINING) discussed earlier in the SPECIALTY JOBS section (see Table 26). While the display of tasks in Table 30 clearly shows that these

NCOs are responsible for supervision, it also reflects the range and scope of the job, in that relatively high percentages of the group are also performing such basic technical tasks as taking statements from suspects or witnesses, handcuffing subjects, and seizing evidence. Table 31 presents representative tasks which reflect the differences between DAFSC 81172 and the 9-skill level and CEM Code groups.

Summary

Distinctions between the 811X2 skill level groups are evident, with personnel at the 3- and 5-skill levels spending the vast majority of their time performing tasks across a number of different jobs. At the 7-skill level, although members still spend over half of their relative duty time on nonsupervisory tasks, a shift toward supervisory functions is clear.

ANALYSIS OF 811X2 AFR 39-1 SPECIALTY DESCRIPTIONS

Survey data were compared to the AFR 39-1 Specialty Descriptions for the Law Enforcement Specialist and Law Enforcement Supervisor, dated 30 April 1991. Comments regarding the A-shred data analysis will be presented in SECTION IV of the report. The Security Police Superintendent comparison was discussed in SECTION II, along with the 811X0 descriptions.

The specialty description for the Law Enforcement Supervisor accurately reflects the combined supervisory and technical nature of the 7-skill level job. The 3-/5-skill level description also accurately portrays the very technical nature of that job.

811X2 TRAINING ANALYSIS

Potential use of survey data in the development of training programs was explained in the discussion of the 811X0 career ladder in SECTION II. For the 811X2 career ladder, technical school personnel from Lackland Training Center matched job inventory tasks to appropriate sections and subsections of the STS and POI for course L3ABR81132-003/004. It was this matching upon which comparison to those documents was based. A complete computer listing displaying the percent members performing tasks, TE and TD ratings for each task, along with the STS and POI matchings, has been forwarded to the technical school for their use in further detailed reviews of appropriate training documents. A summary of this information is presented below.

First-Enlistment Personnel

In this study, there are 695 AFSC 811X2 members in their first enlistment (1-48 months TAFMS), representing 12 percent of the total survey sample. Distribution of these personnel across the career ladder jobs is displayed in Figure 3, which clearly shows members dispersed across a number of the groups

DISTRIBUTION OF 811X2 FIRST-ENLISTMENT PERSONNEL
ACROSS SPECIALTY JOBS
(N= 695)

FIGURE 3

identified in the SPECIALTY JOBS analysis, although the majority (79 percent) are involved in jobs associated with installation patrol and installation entry control. The job performed by these members is highly technical in nature, with technical task performance accounting for approximately 96 percent of their relative duty time (see Table 32). While Table 32 shows that first-term airmen spend some of their job time in a variety of career ladder functional areas, the majority is concentrated on tasks pertaining to general law enforcement, individual weapons maintenance, ABGD operations, law enforcement operations, and traffic management or accident investigations, as well as performing general administrative tasks. Table 33 displays some of the average 76 tasks performed by the group.

As previously stated, another of the objectives of this survey was to gather data for the training center pertaining to weapons carried or utilized, security police tactics or procedures used or practiced, equipment used or operated, as well as utilization of armed or unarmed physical apprehension and restraint techniques (PART). Accordingly, Tables 34 through 39 present percentages of 811X2 first-term airmen responding to questions concerning their activities involving these items. This type of information is useful for both the technical school and MAJCOM training personnel to assist them in focusing limited training time or other resources on the most utilized items for Law Enforcement personnel.

Training Emphasis and Task Difficulty Data

Training emphasis (TE) and task difficulty (TD) factors and Automated Training Indicators (ATI) were discussed earlier in this report (see SURVEY METHODOLOGY - Task Factor Administration; and 811X0 TRAINING ANALYSIS - Training Emphasis and Task Difficulty Data sections) explaining the utility of these additional bits of information. Technical tasks with the highest TE ratings for 811X2 first-term airmen are presented in Table 40, while Table 41 displays those tasks 811X2 raters judged to be most difficult to learn how to do.

Various lists of tasks, accompanied by TE and TD ratings, and where appropriate, ATI values, are contained in the 811X2 TRAINING EXTRACT package and should be reviewed in detail by technical school personnel.

Specialty Training Standard (STS)

A comprehensive review of STS 811X2/X2A, dated November 1988, compared 811X2 STS items to survey data (based on the previously mentioned assistance from technical school personnel in matching job inventory tasks to STS elements). STS paragraphs containing general knowledge information, mandatory entries, subject-matter-knowledge-only requirements, or basic supervisory responsibilities were not examined. Paragraph 23, MILITARY WORKING DOG PROGRAM, pertains to A-shred personnel and was also not evaluated. This paragraph will be discussed along with other A-shred data in SECTION IV of this report. Task knowledge and performance elements of the STS were compared

against the standard set forth in AFR 8-13 (dated 1 August 1986) and AFR 8-13/ATC Supplement 1 (dated 2 March 1987), Attachment 1, paragraph A1-3c(4) (i.e., include tasks performed or knowledge required by 20 percent or more of the personnel in a skill level (criterion group) of the AFS).

Overall, the 811X2/X2A STS provides comprehensive coverage of the work performed by personnel in this career ladder, with survey data supporting most of the essential paragraphs or subparagraphs. Even though some elements did not have high percentages of personnel performing matched tasks, the fact that the supporting tasks were a part of an identifiable job being performed in the career ladder supports the retention of the STS element involving these tasks.

Some few elements of the STS were not supported by occupational survey data and do require review by training personnel and subject-matter experts. Table 42 displays these elements and survey data pertaining to tasks matched to these elements. Even though some of the tasks shown reflect high TE ratings, and some above average TD ratings as well, the low task performance figures suggest evaluation to justify retention in the STS is warranted.

Tasks not matched to any element of the STS are listed at the end of the STS computer listing. These were reviewed to determine if there were any tasks concentrated around any particular functions or jobs. No particular trends were noted. Technical-type tasks performed by 20 percent or more respondents of the STS target groups, but which were not referenced to any STS element, are displayed in Table 43. Training personnel and subject-matter experts should review these tasks to determine if inclusion in the STS is justified.

Plan of Instruction (POI)

Based on the previously mentioned assistance from the technical school subject-matter experts in matching inventory tasks to the 3ABR81132-003/004 POI, dated 15 February 1991, a computer product was generated displaying the results of the matching process. Information furnished for consideration includes percent members performing data for first-job (1-24 months TAFMS) and first-enlistment (1-48 months TAFMS) personnel, as well as training emphasis (TE) and task difficulty (TD) ratings for individual tasks.

POI blocks, units of instruction, and criterion objectives were compared against the standard set forth in Attachment 1, ATCR 52-22, dated 17 February 1989 (30 percent or more of the criterion first-enlistment group performing tasks trained, along with sufficiently high TE and TD ratings on those tasks). Per this guidance, tasks trained in the course which do not meet these criteria must be considered for elimination from the formal course, if not justified on some other acceptable basis.

Review of the tasks matched to the POI reveals that most POI units of instruction or criterion objectives are supported by OSR data (based on percentages of 811X2 first-term airmen performing tasks, or high TE or TD ratings for pertinent tasks), or appear to be teaching steps in the instruction process. There are some units, however, which contain some objectives

that apparently are not supported using these criteria and require further evaluation by training personnel and subject-matter experts (see examples in Table 44). While most of the selected sample tasks received high TE ratings (3.64 or above), all reflect less than 30 percent of the first-term population performing, and a number of them received below average TD ratings. The combination of low percent members performing and below average TD factors suggests the need for close examination of pertinent objectives in these units of instruction to determine if the retention of over 24 hours in the ABR course is justified. It must be remembered that even though a task may have received a high TE rating, this need not dictate use of expensive, limited ABR course time. Low TD ratings for these same tasks suggest the possibility that training on these tasks could well be accomplished by OJT at those bases where jobs using these tasks are performed.

ANALYSIS OF MAJOR COMMANDS (MAJCOM)

Tasks and background data for personnel of the nine MAJCOMs with the largest 811X2 populations were compared to determine whether job content varied as a function of command assignment.

Generally, the jobs performed across the commands were similar, with many tasks performed in common. The largest percentages of duty time in each command were committed to the performance of tasks involving general law enforcement, general administration functions, individual weapons maintenance or armory tasks, and law enforcement operations (see Table 45). Minor variances were noted, with PACAF personnel reporting slightly more time spent on customs tasks (Duty M). ATC personnel reported a notably higher percentage of relative duty time spent on detention and confinement program tasks (Duty L), while SAC airmen reported the least amount of time spent on tasks dealing with ABGD (Duty Q).

SECTION IV

ANALYSIS OF 811X2A DAFSC GROUPS

As explained in SECTION II, data pertaining to DAFSC groups are important to the analysis of each career ladder. Since a comparison of duty and task performance between DAFSCs 81132A and 81152A indicated no substantial difference in the jobs they perform, they will be discussed as a combined group in this report. As previously indicated, DAFSC 81199 and CEM Code 81100 were also combined for reporting purposes.

The distribution of A-shred skill-level groups across the career ladder jobs is displayed in Table 46, while Table 47 offers another perspective by displaying the relative percent time spent on each duty across the skill-level

groups. A typical pattern of progression is present, with personnel spending more of their relative time on duties involving supervisory, managerial, and training tasks as they move upward toward the 7-skill level, the 9-skill level, or the CEM Code.

Skill Level Descriptions

DAFSCs 81132A/81152A. The 189 airmen in the 3- and 5-skill level group, representing 75 percent of the A-shred sample, performed an average of 98 tasks. Members of this group are represented in only five of the jobs identified in the SPECIALTY JOBS analysis (see Table 46), and 82 percent of these personnel are concentrated in only two of those jobs (MWD HANDLING CLUSTER and MWD TRAINING). Performing a highly technical job, 66 percent of their relative duty time is devoted to tasks pertaining to the military working dog (MWD) program, general law enforcement (LE), and LE operations. An additional 18 percent of their relative duty time was committed to tasks associated with administrative procedures and forms pertaining to law enforcement and MWD operations. Table 48 displays selected representative tasks performed by the highest percentages of these airmen. Table 49 displays those tasks which clearly differentiate the 3-/5-skill level and the 7-skill level groups.

DAFSC 81172A. These 64 seven-skill level NCOs (25 percent of the A-shred sample) perform a job which is primarily supervisory and managerial in nature. With 77 percent reporting supervisory responsibilities, group members spend 42 percent of their relative job time on duties involving the performance of supervisory, managerial, personnel training, and administrative tasks. An additional 37 percent of their duty time is devoted to tasks pertaining to the military working dog (MWD) program. The majority of the time spent on MWD activities involves evaluating dogs and dog handlers; providing training (both initial and proficiency) to individual dogs, handlers, and MWD teams; and supervising the overall care of the dogs and kennels (see Table 50 for representative tasks). Group members have a relatively broad job, performing an average of 108 tasks, with 76 tasks accounting for over 50 percent of their job time.

Summary

Distinctions between the 811X2A skill level groups are evident, with personnel at the 3- and 5-skill levels spending the vast majority of their time performing technical law enforcement and MWD handling tasks, while at the 7-skill level, supervisory, managerial, personnel training, and dog handling training functions become the more dominant aspects of the job. Nine-skill level and CEM Code personnel perform a predominantly staff-oriented job with very little activity involving A-shred peculiar tasks (see Tables 10 and 51).

ANALYSIS OF 811X2A AFR 39-1 SPECIALTY DESCRIPTIONS

Survey data pertinent to the A-shred of AFSC 811X2 (Military Working Dog Qualified) were compared to the AFR 39-1 Specialty Description for the Law Enforcement Specialist and Law Enforcement Supervisor, dated 30 April 1991.

The Law Enforcement Specialist description, as it pertains to the A-shred function, is very accurate in depicting the 3-/5-skill level job involving military working dog (MWD) handling.

The description for the Law Enforcement Supervisor, as it pertains to the A-shred member, requires adjustment. Although the responsibility for supervision of the MWD program is mentioned in Paragraph 1, SPECIALTY SUMMARY, there is no reference to the MWD program in Paragraph 2, DUTIES AND RESPONSIBILITIES. Since MWD program tasks account for a significant portion of the A-shred 7-skill level NCO's job time, addition of a subparagraph covering this function (as is provided in the Law Enforcement Specialist description) is appropriate. This deficiency was also noted in the 1984 OSR.

811X2A TRAINING ANALYSIS

Potential use of survey data in the development of training programs was explained in the discussion of the 811X0 career ladder in SECTION II. AFSC 811X2 A-shred incumbents are selected from qualified 811X2 career ladder personnel; therefore, this training analysis will evaluate only those STS elements pertaining to MWD activities. For the A-shred functions, technical school personnel from Lackland Training Center matched inventory tasks to appropriate sections of the STS (paragraph 23) and the POI for Course L3ALR81132A-001/4AST81132A-001, Patrol Dog Handler. It was this matching upon which comparison to these documents was based. A complete computer listing displaying the percent members performing tasks, TE and TD ratings for each task, along with the STS and POI matchings, has been forwarded to the technical school for their use in further detailed reviews of appropriate training documents. A summary of this information is presented below.

First-Enlistment Personnel

In this study, there are 117 AFSC 811X2A members in their first enlistment (1-48 months TAFMS), representing 46 percent of the A-shred sample. These airmen spent the vast majority of their relative duty time (85 percent) performing tasks involving handling military working dogs, performing general law enforcement duties (such as installation patrol and traffic control), forms preparation, and other administrative tasks associated with these activities (see Table 52). An additional 4 percent of their relative duty time was devoted to performance of individual weapons maintenance or armory

tasks. Distribution of these personnel in the career ladder jobs is displayed in Figure 4, reflecting the fact that the highest percentage of A-shred first-term airmen (84 percent) is involved in jobs associated with MWD handling and MWD training. Table 53 displays some of the average 86 tasks performed by the group.

As previously stated, another of the objectives of this survey was to gather data for the training center pertaining to weapons carried or utilized, security police tactics or procedures used or practiced, equipment used or operated, as well as utilization of armed or unarmed physical apprehension and restraint techniques (PART). Accordingly, Tables 54 through 59 present percentages of 811X2A first-term airmen responding to questions concerning their activities involving these items. This type of information is useful for both the technical school and MAJCOM training personnel to assist them in focusing limited training time or other resources on the most utilized items for A-shred personnel.

Training Emphasis and Task Difficulty Data

Training emphasis (TE) and task difficulty (TD) factors and Automated Training Indicators (ATI) were discussed earlier in this report (see SURVEY METHODOLOGY - Task Factor Administration; and 811X0 TRAINING ANALYSIS - Training Emphasis and Task Difficulty Data sections) explaining the utility of these additional bits of information. Technical tasks with the highest TE ratings for 811X2A first-term airmen are presented in Table 60, while Table 61 displays those tasks 811X2A raters judged to be most difficult to learn how to do.

Various lists of tasks, accompanied by TE and TD ratings, and where appropriate, ATI values, are contained in the 811X2A TRAINING EXTRACT package and should be reviewed in detail by technical school personnel.

Paragraph 23, Specialty Training Standard (STS)

A comprehensive review of paragraph 23, MILITARY WORKING DOG PROGRAM (peculiar to A-shred personnel), STS 811X2/X2A, dated November 1988, compared STS items to survey data (based on the previously mentioned assistance from technical school personnel in matching job inventory tasks to STS elements). STS subparagraphs containing general knowledge information or subject-matter-knowledge-only requirements were not examined.

Per standards set forth in AFR 8-13 (previously described), the elements of the MILITARY WORKING DOG PROGRAM portion of the STS are well supported by survey data, and no problems or deficiencies were noted.

Plan of Instruction (POI)

Based on the assistance from the technical school subject-matter-experts in matching inventory tasks to the 3ALR81132A-001/4AST81132A-001 POI, dated 22 August 1990, a computer product was generated displaying the results of the

matching process. Information furnished for consideration includes percent members performing data for first-job (1-24 months TAFMS) and first-enlistment (1-48 months TAFMS) personnel, as well as TE and TD ratings for individual tasks.

POI units of instruction and criterion objectives were evaluated using previously discussed standards in ATCR 52-22. All but one of the criterion objectives are strongly supported by survey data based on percentages of first-term personnel performing significant dog handling-related tasks or the high TE ratings for some tasks. Only Unit 7b (4 hours) (pertaining to "tracking") reflected tasks taught with less than 30 percent of first-term A-shred personnel performing the tasks. Training personnel and subject-matter experts should review this portion of the POI to determine if retention of this training is justified.

ANALYSIS OF MAJOR COMMANDS (MAJCOM)

Tasks and background data for the six MAJCOMs with the largest 811X2A populations were compared to determine whether job content varied as a function of command assignment.

By far the largest percentage of relative job time in each MAJCOM is devoted to the performance of tasks involving handling and working with dogs (see Duty N, Table 62). Although there is some variance across commands in the amount of time spent on MWD program tasks, review of the specific tasks and combination of tasks reveals that there is little real variation in the jobs performed. Two minor variances noted when reviewing Table 62 are the lower percentages of time spent on duties involving general administration and general law enforcement tasks (Duties E and F) by ATC personnel. These variances do not signify a significant difference in job content across commands.

SECTION V

JOB SATISFACTION ANALYSIS

An examination of the job satisfaction indicators of various groups can give career ladder managers a better understanding of some of the factors which may affect the job performance of airmen in the career ladder. Attitude questions covering job interest, perceived utilization of talents and training, sense of accomplishment from work, and reenlistment intentions were included in the survey booklet to provide indications of job satisfaction. Tables 63, 64, and 65 present job satisfaction data for AFSC 811X0, 811X2, and 811X2A TAFMS groups (respectively), together with data for a comparative sample of other Direct Support career ladders surveyed in 1991. These data

* Columns may not add to 100 percent due to nonresponse or rounding

** Comparative sample of DIRECT SUPPORT career ladders surveyed in 1991 (Includes AFSCs 551X0, 551X1, 552X0, 612X0, 612X1, and 753X0)

can give a relative measure of how the job satisfaction of AFSC 811XX career field personnel compare with other similar Air Force specialties. An indication of how job satisfaction perceptions for the 811X0, 811X2, and 811X2A career ladders have changed over time is provided in Tables 66, 67, and 68, where TAFMS group data for 1992 survey respondents are presented, along with data from respondents to the last occupational survey involving these career ladders, published in 1984. Finally, Table 69 presents job satisfaction responses for the specialty job groups discussed in the SPECIALTY JOBS section of this report. An examination of these data can show how overall job satisfaction may be influenced by the type of job performed.

Review of Table 63 reflects that responses from 811X0 personnel are all lower than those of the comparative sample across all the TAFMS groups. Expressed job interest and perceived use of talents are substantially lower for the first- and second-enlistment groups. Even though 811X0 personnel reported very low job interest and perceived use of talents, they do indicate they are doing what they were trained to do.

Responses for 811X2 personnel (see Table 64), while positive, are generally less than the comparative sample groups in other Direct Support career ladders. It should be noted that the expressed job interest and talent utilization responses for 811X2 airmen are considerably higher than those for the 811X0 groups.

Table 65 displays job satisfaction responses for 811X2A TAFMS groups. In contrast to 811X0 and 811X2 group comparisons, 811X2A first-term airmen responses are higher than the comparative sample groups (except for reenlistment intentions). Reenlistment intentions for 811X2A second-enlistment personnel are markedly lower than the comparative sample group.

Comparison of job satisfaction indicator responses of current survey 811X0, 811X2, and 811X2A TAFMS groups to those in the 1984 survey reflects that 811X0 airmen in the 1992 sample groups (see Table 66) are even less satisfied now than in 1984. While job interest responses for current 811X2 airmen (Table 67) are lower than 1984 responses, perceived use of training responses are essentially the same and on par with those in 1984. Except for the reenlistment responses, all indicators for 811X2A personnel (see Table 68) are equal or higher for 1992 survey respondents. In reviewing these tables, it should be noted that positive responses pertaining to perceived utilization of training for 811X0, 811X2, and 811X2A personnel are relatively high and indicate that training provided in these career ladders appears to be pretty well on target.

In the majority of the groups identified in the SPECIALTY JOBS analysis, members indicate that the jobs they perform are interesting, with 17 of the 21 groups showing 50 percent or better responding positively (see Table 69). It is noteworthy, however, that two of the groups (AIRCRAFT AND WEAPONS STORAGE SECURITY and MISSILE SECURITY--see highlighted figures in Table 69) reflect positive ratings from less than 30 percent of the members, and, significantly, these two groups represent two of the major clusters of 811X0 personnel (accounting for over 50 percent of the 811X0 airmen in the sample).

Five of the 21 groups in the SPECIALTY JOBS analysis indicate they are less than satisfied (fewer than 50 percent responding positively) with the sense of accomplishment gained from their work (this number includes all 4 of the groups noted above in the discussion of expressed job interest). Again, it is noteworthy that four of the five groups are comprised primarily of 811X0 personnel.

Perceived utilization of talents was generally high for the job groups overall. Five groups had less than 60 percent of the members responding positively, and two of these five had less than 50 percent of their members with positive responses (see highlighted figures in Table 69).

All of the groups indicated that the work they were performing utilized their training (over 50 percent responding positively). It should be noted that even though the two largest groups, comprised primarily of 811X0 personnel, did not respond positively to job interest or use of talents, they do indicate that they were trained to do the jobs they are performing.

Expressed reenlistment intent for 20 of the 21 job groups was positive. Only the INSTALLATION ENTRY CONTROL group reported less than 50 percent positive reenlistment intent.

When there are serious problems in a career ladder, survey respondents are usually quite free with write-in comments to complain about perceived problems in the field. Sixteen percent of the survey sample used the write-in feature to convey some type of information, and 10 percent of the comments received (representing less than 2 percent of the total sample) could be characterized as complaints about the career field. While no major trends were noted among the complaint-type write-ins, a number of comments were received pertaining to talents not being utilized properly (thus lending support to the low indications reflected in Tables 63 and highlighted figures of Table 69). Additionally, a number of respondents also feel that there are too many NCOs (primarily SSgts and TSgts), thus resulting in their having to perform jobs that they used to do when they were lower level airmen.

Career ladder managers and first-line supervisors must take note of the extremely low job satisfaction indicator responses for 811X0 career ladder personnel. These figures were low in 1984 and are even worse now. Any efforts to enhance or vary 811X0 jobs in some way would almost certainly be beneficial and have a positive effect on retention and recruiting in the future.

IMPLICATIONS

This survey was requested to evaluate changes in the career ladders and to obtain current task and equipment data for use in evaluating current training programs. As previously mentioned in this report, even though there are situations where 811X0 and 811X2/A personnel perform similar tasks, by and large, the differences between the two ladders and the A-shred are quite clear. Survey data indicate personnel are performing jobs as defined in the current classification structure.

Entry level training programs for the 811XX career field are, on the whole, working well. The previously noted positive response patterns by various groups to the question pertaining to training utilization lend support to this observation. Still, some adjustments to the STSs and POIs were discussed in the individual career ladder sections of this report which warrant evaluation by training personnel, subject-matter experts, and career ladder managers.

Extremely low job interest continues to be a concern in the 811X0 career ladder and deserves the full attention of career ladder managers.

APPENDIX A
SELECTED REPRESENTATIVE TASKS PERFORMED
BY CAREER LADDER STRUCTURE GROUPS

TABLE I

GROUP ID NUMBER AND TITLE: ST0300, INSTALLATION ENTRY CONTROL CLUSTER
 GROUP SIZE: 218 PERCENT OF SAMPLE: 4%
 PREDOMINANT GRADE: E-3 AVERAGE TICF: 29 MONTHS
 AVERAGE TAFMS: 32 MONTHS

The following are in descending order by percent members performing:

<u>REPRESENTATIVE TASKS</u>	<u>PERCENT MEMBERS PERFORMING</u>
F343 Issue visitor passes	82
F398 Stand guardmount	82
F312 Direct traffic	80
0702 Assemble or disassemble M9 9mm or M15 .38 caliber revolvers	80
F342 Issue traffic tickets or violation notices	76
F334 Fire weapons to maintain qualification	75
E175 Initiate AF Forms 52 (Evidence Tag)	74
E260 Initiate or complete DD Forms 1408 (Armed Forces Traffic Ticket)	73
0695 Assemble or disassemble GAU-5As or M-16 rifles	71
F294 Brief post reliefs	70
E177 Complete AF Forms 52	69
E204 Initiate or complete AF Forms 75 (Visitor/Vehicle Pass (Storage Safeguard))	68
F376 Provide directions or information to visitors	66
0705 Clean weapon mechanisms or parts	65
0694 Apply weapons preservatives or lubricants	64
F352 Open or close installation primary entry control points	63
E190 Initiate AF Forms 1169 (Statement of Witness)	62
F335 Handcuff subjects	61
G429 Perform traffic stops	60
F378 Respond to duress or alarm activations	59
E192 Complete AF Forms 1169	59
F304 Conduct privately owned vehicle (POV) simple inspections at installation entry points	57
F291 Apprehend subjects	57
E189 Complete AF Forms 1168	55
F310 Detain civilians	52
F300 Conduct building security checks	51
E187 Initiate AF Forms 1168 (Statement of Suspect)	50
F289 Advise individuals of their rights under Article 31, Uniform Code of Military Justice (UCMJ)	50
E198 Complete AF Forms 1668	48
E196 Initiate AF Forms 1668 (Field Interview)	47
F307 Conduct suspect wall searches, without MWDs	45

TABLE II

GROUP ID NUMBER AND TITLE: ST0346, INSTALLATION PATROL CLUSTER
 GROUP SIZE: 1,029 PERCENT OF SAMPLE: 17%
 PREDOMINANT GRADE: E-4/E-5 AVERAGE TICF: 76 MONTHS
 AVERAGE TAFMS: 80 MONTHS

The following are in descending order by percent members performing:

REPRESENTATIVE TASKS	PERCENT MEMBERS PERFORMING
E190 Initiate AF Forms 1169 (Statement of Witness)	93
E175 Initiate AF Forms 52 (Evidence Tag)	90
E177 Complete AF Forms 52	86
F291 Apprehend subjects	85
F335 Handcuff subjects	84
F378 Respond to duress or alarm activations	83
E196 Initiate AF Forms 1668 (Field Interview)	83
F342 Issue traffic tickets or violation notices	80
F288 Advise individuals of their Fifth Amendment rights	80
F339 Interview witnesses, or complainants	80
G429 Perform traffic stops	77
F294 Brief post reliefs	75
F312 Direct traffic	72
F300 Conduct building security checks	72
O702 Assemble or disassemble M9 9mm or M15 .38 caliber revolvers	71
F307 Conduct suspect wall searches, without MWDs	70
F380 Respond to on-base domestic disturbances	70
F306 Conduct suspect kneeling searches, without MWDs	66
E229 Initiate or complete AF Forms 1315 (Accident Report)	64
F355 Operate vehicle radios or public address systems	62
R884 Secure traffic accident scenes	62
R886 Write traffic accident reports	60
F343 Issue visitor passes	59
F364 Perform on-base mobile patrols, without MWDs or horses	58
R885 Test or operate speed measuring devices	56
F303 Conduct preliminary investigations of incidents or complaints	55
R867 Administer field sobriety tests, other than improved sobriety techniques	55
F317 Employ challenge techniques, other than combat challenges	52
F329 Escort personnel transporting funds or firearms, without MWDs	52
F293 Brief central security control (CSC) or law enforcement (LE) desks on security status	51
F374 Plot accidents, incidents, or disasters on maps	51

Q778 Employ field signals	69
F382 Respond to priority resource security situations, such as helping-hand or covered-wagon	69
Q751 Conduct combat searches	69
F317 Employ challenge techniques, other than combat challenges	68
F332 Examine restricted or controlled area badges	66
F307 Conduct suspect wall searches, without MWDs	66
F306 Conduct suspect kneeling searches, without MWDs	66
Q758 Deploy during vehicle-mounted ABGD operations	65
Q830 Participate in combat patrols, other than as leader	63
Q748 Analyze terrain	62
Q829 Participate in assault elements, other than as leader	60
Q776 Employ communication authentication systems	59
Q789 Employ stalking or reconnaissance techniques	58
Q837 Perform listening post or observation post sentry duties	55
Q769 Develop ABGD sector sketches or fields of fire	52

TABLE XII

GROUP ID NUMBER AND TITLE: ST0293, EMERGENCY SERVICE TEAM (EST)
 GROUP SIZE: 15 PERCENT OF SAMPLE: .2%
 PREDOMINANT GRADE: E-4/E-5 AVERAGE TICF: 94 MONTHS
 AVERAGE TAFMS: 97 MONTHS

The following are in descending order by percent members performing:

<u>REPRESENTATIVE TASKS</u>	<u>PERCENT MEMBERS PERFORMING</u>
P724 Conduct tactical building approaches or force positioning	100
P744 Write EST operations orders	100
P745 Write EST warning orders	100
P730 Employ tactical team lift or boosting techniques	100
P726 Employ combat sniper marksman skills during actual or simulated EST operations	93
P739 Plot EST inner or outer perimeter positions	93
P742 Select marksman overwatch positions	93
P732 Enter buildings through doors or windows using tactical ground-level entry techniques	93
P740 Reconnoiter buildings or surrounding areas	87
P741 Sectorize buildings or surrounding areas for EST search and clear operations	87
P725 Draft EST operations plans	87
P738 Maintain EST tactical equipment	87
P743 Write EST after action reports	87
P722 Advise on-scene commanders on EST capabilities and limitations	87
P731 Employ wrecking tools for building entry	87
P727 Employ counter sniper marksman skills during actual or simulated EST operations	80
P728 Employ diversionary tactics using pyrotechnics	80
P723 Assist on-scene commanders in tactical planning	80
P736 Enter buildings using stable rappelling	80
P733 Enter buildings using grappling hook or knotted climbing ropes	80
P737 Evacuate wounded or innocents from danger areas	73
Q749 Camouflage equipment or positions	53
Q746 Adapt individual firing positions to terrain	53
Q790 Employ team movement formations	53
O694 Apply weapons preservatives or lubricants	47

TABLE XIII

GROUP ID NUMBER AND TITLE: ST0096, ARMORY

GROUP SIZE: 202

PERCENT OF SAMPLE: 3%

PREDOMINANT GRADE: E-4

AVERAGE TICF: 56 MONTHS

AVERAGE TAFMS: 60 MONTHS

The following are in descending order by percent members performing:

<u>REPRESENTATIVE TASKS</u>	<u>PERCENT MEMBERS PERFORMING</u>
0695 Assemble or disassemble GAU-5As or M-16 rifles	93
0708 Inventory ammunition, weapons, or equipment	93
0720 Secure ammunition, weapons, or equipment	92
0694 Apply weapons preservatives or lubricants	92
0709 Issue ammunition	90
0718 Perform weapons functional checks	89
0705 Clean weapon mechanisms or parts	88
0719 Recharge portable communications equipment batteries	88
0707 Inspect weapons operational condition	86
0711 Issue weapons or equipment to security police or combat crew personnel	83
0702 Assemble or disassemble M9 9mm or M15 .38 caliber revolvers	83
0697 Assemble or disassemble M-203 grenade launchers	76
0721 Secure weapon storage facilities	75
0710 Issue privately owned weapons	71
0713 Maintain ammunition, weapons, or unit equipment records	70
E226 Initiate or complete AF Forms 1297 (Temporary Issue Receipt)	66
0698 Assemble or disassemble M-60, M2 heavy barrel (HB) .50 caliber or M249 machine guns	64
0700 Assemble or disassemble M148, M79, or M203 grenade launchers	63
E200 Initiate or annotate AF Forms 1109 (Visitor Register)	63
0716 Operate or monitor weapons facility alarm systems	61
0696 Assemble or disassemble M-12 or M870 shotguns	59
E228 Initiate or complete AF Forms 1314 (Firearms Registration)	58
0717 Perform minor weapons operator maintenance, other than cleaning	52
E216 Initiate or complete AF Forms 629 (Small Arms Hand Receipt)	48
B42 Direct armory operations	46
E238 Initiate or complete AF Forms 2530 (Alarm System Test Record)	43
0712 Issue weapons, other than security police, combat crew, or privately owned weapons	40

TABLE XIV
